

## Your group members

- Adrian Guia
- Julian Segura
- Isaac Kim
- Shraddha Anand

## Your project idea

A web application with similar functionality to Reddit. Users will have the ability to post, edit posts, read posts, comment on posts, upvote and downvote posts, and delete posts.

## List of models and their properties

### User

- Name
- Email
- Password
- Bio

### Post

- Title
- Image Content (default = null)

- Number of downvotes

### Comment (Subdocument, Stretch)

- Content
- User
- Post-id
- Timestamp
- Number of upvotes
- Number of downvotes

# Scrum manager/project manager's name

Shraddha Anand

## User stories

As a user, I want to be able to...

- create a post, so that I can contribute to communities
- update my posts, so that I can fix typos, or change the content of my posts
- read others' posts, so that I can see what other people have to share
- delete my posts, so that I can remove embarrassing content
- comment on posts, so that I can share my opinion on the topic
- upvote and downvote posts, so that I can share my opinion without having to comment
- navigate easily through the site, so that I can focus on the content rather than navigating
- view this web application on all devices, so that I'm not limited to one
- access this application through the web, so that I don't have to fork the repo to use the application

As a hiring manager, I want to be able to see...

- good git workflow
- clean, well-documented code
